

Workshop in Methods + CEWiT

Fall 2016 Python Workshop Series

Introduction to Web Scraping with Python

NaLette Brodnax

Center of Excellence for Women in Technology

Web scraping is a method of extracting and restructuring information from web pages. This workshop will introduce basic techniques for web scraping using the popular Python libraries BeautifulSoup and Requests. Participants will practice accessing websites, parsing information, and storing data in a CSV file. This workshop is intended for social scientists who are new to web scraping but have some familiarity with Python or have attended the Intro to Python workshop.

This workshop is the second in a three-part series offered in collaboration between the Workshop in Methods and the Center of Excellence for Women in Technology. Join us for Introduction to Python (September 23) and Introduction to Using APIs with Python (November 11). Visit <http://go.iu.edu/wim> for more details.

Friday, September 30, 2016, 2-3:30pm
